NEW VIDEOS SHOW EASE OF SMARTPLUG INSTALLATION

Seeing is believing and boaters can view just how simple it really is to switch to a new, safer shorepower system. SmartPlug Systems created two short installation videos, giving owners a better understanding of how to retrofit their current system with the revolutionary SmartPlug system.

The videos feature the 30 amp connector and inlet and can be found on www.smartplug.com on the Videos page, as well as on the site's individual installation pages. One movie, www.smartplug.com/install_30a_plug.html, demonstrates how to retrofit the connector, while the other, www.smartplug.com/install_30a_inlet.html, shows how to adapt the inlet. Step-by-step written instructions with accompanying photos are also available on the installation section of the website.

Those who want to learn more about the SmartPlug system can watch www.smartplug.com/videos.html. A unique shorepower system, the SmartPlug is designed to replace the outdated standard in use today. It helps prevent loose connections and corrosion, the leading causes of marine fires and electrocution.
